

Neural Style Transfer

Content cost function

Content cost function

$$\underline{J(G)} = \alpha \underline{J_{content}(C,G)} + \beta J_{style}(S,G)$$

- Say you use hidden layer *l* to compute content cost.
- Use pre-trained ConvNet. (E.g., VGG network)
- Let $\underline{a^{[l](C)}}$ and $\underline{a^{[l](G)}}$ be the activation of layer l on the images
- If $a^{[l](C)}$ and $a^{[l](G)}$ are similar, both images have similar content $\int_{Content} \left(C_{C,C} \right) = \frac{1}{2} \left[\left(\frac{1}{2} \left(C_{C} \right) \right) \right]^{2} dC_{C}$
